Milton Academy, Milton, MA

TECHNICAL SKILLS

Languages: Python, R, JavaScript, HTML/CSS, PostgreSQL

Applications: Github, MongoDB, PostgreSQL, Flask, Command Line, Tableau

Tools: Excel, Scikit Learn, Tensorflow, Pandas, Jupyter Notebook, D3, Plotly, Beautiful Soup, Chromedriver

Microsoft Excel: Advanced methods in statistical modeling, prediction, pivot tables, and VBA scripting.

PROJECTS

Renewable Energy Visualizations | https://github.com/jamescadigan97/Project2_Renewables.git

- Created a Flask application that navigated through different html files.
- Created a web-scraping function through Flask to find recent articles and links.
- Designed Heatmap, choropleth and location marker graphs through Leaflet.
- Utilized JavaScript to design Sunburst visualization from Plotly library.
- Launched app through Amazon web services.

Stock Predictor | https://github.com/jamescadigan97/stock_predictions.git

- Created a Flask application that navigated through different html files.
- Created a deep learning model that predicted stock closing prices based on opening prices.
- Created a deep learning model that predicted future stock closing prices based on previous closing prices.
- Utilized JavaScript to visualization from Plotly library.
- Launched app through Heroku.

WORK EXPERIENCE

UBS, *Wealth Management Intern*, Boston, MA,

May-August 2019

- Researched the performance of bond managers and made recommendations based on relevant metrics.
- Summarized the payouts of varied structured products and made recommendations on the outlook of different markets.
- Generated portfolio reports from Aladdin and Morningstar.
- Organized securities of potential clients in order to create an overview of the assets.
- Created presentations for current and prospective clients, especially for retirees.
- Summarized news columns and articles detailing strategies pertaining to investing, retirement saving, etc.

Adventis' Financial Modeling Certification (FMCTM) Program, Brown University

March 2018

- Built a three-statement financial model of a real company from "scratch" with circular schedules for working capital, capital expenditures, interest, and debt.
